

## Senior JAVA Software Engineer / Technical Lead

Due to the exponential growth experienced by our business, we need to recruit a highly skilled and experienced engineer who is interested in combining **hands-on development work** and **leading a small but talented team of software engineers**.

To join us you'll need proven experience in designing and coding **client-server consumer applications** and be able to blend creativity with solid delivery.

### Skills & Experience

#### Essential skills:

- Advanced knowledge of Java and related technologies (J2EE, J2SE)
- Proven experience in designing and developing complex solutions in application servers and Servlet containers
- Proven experience developing and integrating with Web Services
- Proven experience working with JDBC/ORM tools and relational databases
- Advanced OO design and data modelling skills
- Advanced ability to convert complex requirements and abstract concepts into working design and software application
- Experience in the full software development lifecycle.
- Technical design leadership experience
- Experience in designing user-centric solutions
- Strong organisational and problem-solving skills
- Strong ability to evaluate alternatives and understand business implications and impact
- Proactive, self motivated professional who takes pride in his/her work

#### Other skills of interest:

- Knowledge and experience in C++
- Familiar with the CVS version control system.
- Confident deploying and running systems on both Windows & Linux.

#### Required Experience:

Solid experience is essential in the following:

- Working on client-server applications
- Have worked extensively developing consumer-facing web applications.
- Experience working with customers/clients.
- Technical team management

Candidates must hold a valid UK work permit.
